SNB-19

DSMZ

© by DSMZ-Deutsche Sammlung von Mikroorganismen und Zellkulturen GmbH

Cell line	SNB-19
Cell type	human glioblastoma
DSMZ No	ACC 325
Origin	established from the surgical resection of a left parieto-occipital gl from a 47-year-old man in 1980; cells were described to secrete plasmi activator, to be clonogenic in soft agar and to be tumorigenic in nude
References	Gross et al., Cancer Res. 48: 291-296 (1985)
Depositor	Dr. H. Weich, GBF, Braunschweig, Germany

## DSMZ Cell Culture Data

Morphology	adherent fibroblastic cells growing as monolayer with contact inhibiti occasional giant cells
Medium	90% Dulbecco's MEM + 10% FBS
Subculture	split confluent culture 1:10 every 3-5 days using trypsin/EDTA; seed o 10 <sup>6</sup> cells/80 cm <sup>2</sup> in 8-10 ml medium
Incubation	at 37 °C with 5-10% CO <sub>2</sub>
Doubling time	doubling time of ca. 24 hours
Harvest	cell harvest of ca. 15 x 10 <sup>6</sup> cells/175 cm <sup>2</sup>
Storage	frozen with 70% medium, 20% FBS, 10% DMSO at about 2-4 x 10 <sup>6</sup> cells/amp

## DSMZ Scientific Data

Mycoplasma	negative in DAPI, microbiological culture, RNA hybridization, PCR assa
Immunology	cytokeratin-, desmin-, endothel-, GFAP+, neurofilament-, vimentin+
Fingerprint	multiplex PCR of minisatellite markers revealed a unique DNA profile
Species	confirmed as human with IEF of AST, MDH, NP
Cytogenetics	human hypotriploid karyotype with 15% polyploidy; 63(58-63)<3n>XXY, +1 -10, -12, -13, -14, -15, -16, -18, -21, -22, +2mar; der(1)del(1)(q23)ins(1;4)(p32;q23q27), del(1)(q13), del(4)(q23q27), del(4)(q28q35), add(8)(q24), add(11)(p15), der(19)add(19)(p13)add(19)( submetacentric, der(19) and der(1) markers; matches published karyotyp
Viruses	ELISA: reverse transcriptase negative; PCR: EBV-, HBV-, HCV-, HHV-8-, HTLV-I/II-

## Search

Before submitting an order you will be asked to read and accept the terms and conditions of ATCC's Material Transfer Agreement.

Customers in Europe, Australia, Japan, Korea, New Zealand and Taiwan must contact a local distributor for pricing information and to place an order for ATCC cultures and products.

Cell Lines	
<b>ATCC Number:</b> CRL-1620	<a href="#">Order this item</a>
<b>Designation:</b> A172	<b>Price:</b> \$175.00
<b>Biosafety Level:</b> 1	<b>Depositors:</b> DJ Giard
<b>Medium &amp; Serum:</b> See Propagation	<b>Shipped:</b> frozen
<b>Organism:</b> <i>Homo sapiens</i> (human)	<b>Growth Properties:</b> adherent
<b>Tissue:</b> brain; glioblastoma	
<b>Permits/Forms:</b>	In addition to the MTA mentioned above, other ATCC and/or regulatory permits may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please click here for information regarding the specific requirements for shipment to your location.
<b>Related Cell Culture Products</b>	
<b>Tumorigenic:</b>	no; The cells were not tumorigenic in immunosuppressed mice, but did form colonies in semisolid medium.
<b>Age Stage:</b>	53 years
<b>Gender:</b>	from male organism(s)
<b>Propagation:</b>	ATCC medium: Dulbecco's modified Eagle's medium with 4 mM L-glutamine adjusted to contain 1.5 g/L sodium bicarbonate and 4.5 g/L glucose, 90%; fetal bovine serum, 10% Temperature: 37.0 C
<b>Subculturing:</b>	Remove medium, and rinse with 0.25% trypsin, 0.03% EDTA solution. Remove the solution and add an additional 1 to 2 ml of trypsin-EDTA solution. Allow the flask to sit at room temperature (or at 37C) until the cells detach Add fresh culture medium, aspirate and dispense into new culture flasks.
<b>Split Ratio:</b>	A subcultivation ratio of 1:3 to 1:8 is recommended
<b>Fluid Renewal:</b>	Every 2 to 3 days
<b>Freeze Medium:</b>	culture medium 95%; DMSO, 5%
<b>Related Products:</b>	Recommended medium (without the additional supplements or serum described under ATCC Medium) - ATCC No: 30-2002 recommended serum - ATCC No 30-2020

#### Notices and Disclaimers

ATCC products are intended for laboratory research purposes only. They are not intended for use in humans.

While ATCC uses reasonable efforts to include accurate and up-to-date information on this site, ATCC makes no warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. ATCC does not warrant that such information has been confirmed to be accurate.

All prices are listed in U.S. dollars and are subject to change without notice. A discount off the current list price will be applied to most cultures for nonprofit institutions in the United States and Canada. Cultures that are ordered as test tubes or flasks will carry an additional laboratory fee. Fees for permits, shipping, and handling may apply.

You may continue your word search in Cell Lines by typing in your search criteria below or returning to the Cell Lines menu. To search another product line, choose one from the dropdown box at the top. For complex searches using boolean operators, the following characters must be used: & (for AND), | (for OR), ^ (for AND NOT). An asterisk (\*) is used as the wildcard. For more information please review the Search Help.

For query options, please read the search help.

<b>Related Cell Culture Products</b>	
<b>Comments:</b>	This is one of a number of cell lines derived from malignant gliomas (see also ATCC HTB-15, ATCC HTB-16 and ATCC HTB-17) by J. Ponten and associates from 1966 to 1969. Mycoplasma contamination was eliminated in September 1975.
<b>Tumorigenic:</b>	Yes, in nude mice inoculated subcutaneously with 10(7) cells
<b>Antigen Expression:</b>	Blood Type A, Rh+
<b>Karyotype:</b>	This is a hypodiploid human cell line with the modal chromosome number of 44 occurring in 48% of cells. The rate of higher ploidy was 5.9%. Twelve markers were common to all cells, including der(1)t(1;3) (p22;q21), der(16)t(1;16) (p22;p12), del(9) (p13) and nine others. The marker der(1) had two copies in most cells. There was only one copy of normal X. N1, N6 and N9 were not found.
<b>Isoenzymes:</b>	AK-1, 1; ES-D, 1; G6PD, B; GLO-I, 1; Me-2, 1; PGM1, 2; PGM3, 1
<b>Age Stage:</b>	44 years
<b>Gender:</b>	from female organisms(s)
<b>Ethnicity:</b>	Caucasian

<b>Propagation:</b>	ATCC medium: Minimum essential medium (Eagle) with 2 mM L-glutamine and Earle's BSS adjusted to contain 1.5 g/L sodium bicarbonate, 0.1 mM non-essential amino acids, and 1.0 mM sodium pyruvate, 90%; fetal bovine serum, 10% Temperature: 37.0 C
<b>Subculturing:</b>	Remove medium, and rinse with 0.25% trypsin, 0.03% EDTA solution. Remove the solution and add an additional 1 to 2 ml of trypsin-EDTA solution. Allow the flask to sit at room temperature (or at 37C) until the cells detach. Add fresh culture medium, aspirate and dispense into new culture flasks.
<b>Split Ratio:</b>	A subcultivation ratio of 1:2 to 1:5 is recommended
<b>Fluid Renewal:</b>	2 to 3 times per week
<b>Freeze Medium:</b>	Culture medium, 95%; DMSO, 5%
<b>Related Products:</b>	Recommended medium (without the additional supplements or serum described under ATCC Medium) - ATCC No: 30-2003 recommended serum - ATCC No: 30-2020

Customers in Europe, Australia, Japan, Korea, New Zealand and Taiwan must contact a local distributor for pricing information and to place an order for ATCC cultures and products.

Cell Lines	
<b>ATCC Number:</b> HTB-16	<a href="#">Order this item</a>
<b>Designation:</b> U-138 MG	<b>Price:</b> \$215.00
<b>Biosafety Level:</b> 1	<b>Depositors:</b> J Ponten
<b>Medium &amp; Serum:</b> See Propagation	<b>Shipped:</b> frozen
<b>Organism:</b> <i>Homo sapiens</i> (human)	<b>Growth Properties:</b> adherent
<b>Tissue:</b> brain; glioblastoma	<b>Morphology:</b> polygonal
<b>Permits/Forms:</b>	In addition to the MTA mentioned above, other ATCC and/or regulatory permits may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please click here for information regarding the specific requirements for shipment to your location.
<b>Related Cell Culture Products</b>	
<b>Comments:</b>	NOTE: The two glioblastoma cell lines, U-118 MG (HTB-15) and U-138 MG (HTB-16), reportedly from different individuals have identical VNTR and similar STR patterns. U-118 MG and U-138 MG are very similar cytogenetically and share at least six derivative marker chromosomes. This is one of a number of cell lines derived from malignant gliomas (see also ATCC HTB-14, ATCC HTB-15 and ATCC HTB-17) by J. Ponten and associates from 1966 to 1969. It differs from ATCC HTB-14 in morphology and it has a slower proliferation rate. Mycoplasma contamination was observed and cured by March 1974.
<b>Tumorigenic:</b>	No, in immunosuppressed mice
<b>Antigen Expression:</b>	Blood Type A; Rh+
<b>DNA Profile (STR):</b>	Amelogenin: X,Y CSF1PO: 12 D13S317: 9,11 D16S539: 12,13 D5S818: 11 D7S820: 9 TH01: 6 TPOX: 8 vWA: 18

<b>Karyotype:</b>	Hyperdiploid to pentaploid with several markers; the stemline chromosome number is near triploid with the 2S component occurring at 9.8%. Five markers [t(11;5), t(8q;4), t(19;?18), M1 and M2] were common to most S metaphases. One chromosome 4 could be found in every S metaphase. Chromosome composition was very uniform among cells.
<b>Isoenzymes:</b>	AK-1, 1; ES-D, 1; G6PD, B; GLO-I, 1-2; Me-2, 1; PGM1, 1; PGM3, 1
<b>Age Stage:</b>	47 years
<b>Gender:</b>	from male organism(s)
<b>Ethnicity:</b>	Caucasian
<b>Propagation:</b>	ATCC medium: Minimum essential medium (Eagle) with 2 mM L-glutamine and Earle's BSS adjusted to contain 1.5 g/L sodium bicarbonate, 0.1 mM non-essential amino acids, and 1.0 mM sodium pyruvate, 90%; fetal bovine serum, 10% Temperature: 37.0 C
<b>Subculturing:</b>	Remove medium, and rinse with 0.25% trypsin, 0.03% EDTA solution. Remove the solution and add an additional 1 to 2 ml of trypsin-EDTA solution. Allow the flask to sit at room temperature (or at 37C) until the cells detach. Add fresh culture medium, aspirate and dispense into new culture flasks.

## General Cell Collection

ECACC No.	89081403
Cell Line Name	U373 MG
Keywords	Human glioblastoma astrocytoma
Cell Line Description	Derived from a malignant tumour by explant technique.
Species	Human
Tissue	brain
Morphology	Epithelial
Passage Number	177
Sub Culture Routine	Split sub-confluent cultures (70-80%) 1:3 to 1:6 i.e. seeding at 2-4x10,000 cells/cm <sup>2</sup> using 0.25% trypsin or trypsin/EDTA; 5% CO <sub>2</sub> ; 37°C.
Culture Medium	EMEM (EBSS) + 2mM Glutamine + 1% Non Essential Amino Acids (NEAA) + 1mM Sodium Pyruvate (NaP) + 10% Foetal Bovine Serum (FBS).
Karyotype	2n = 46, the stemline chromosome number is hypotri
Depositor	Dr J Clarke, AVRI, Pirbright
Originator	No
Country	UK
References	Acta Path Microbiol Scan 1968;74:465
Additional Literature Report	Cell characteristics: 1) expresses high levels of alpha B crystallin and small heat-shock protein HSP28 (11) 2) expresses substance P receptor (13) 3) expresses TNF-alpha (14) Applications: 1) Study of neurokinin-1 receptor (1,2,4) 2) Regulations of inositol-phosphate accumulation and Protein-kinase C activation: effect of histamine (5), carbachol (5), substance P and related tachykinins (8) 3) Study of drugs and antineoplastic agents: combined effects of growth factors (3) 4) Study of HIV infection: effect of cytomegalovirus on HIV replication (6, 12); mechanism of HIV entry into neuronal cells (9, 16, 17, 18) 5) Regulation of gene transcription and protein expression: expression of glial and neuronal cytoskeletal proteins (10); study of the DNA-binding protein IE86 (7); cytokine expression within astrocytoma cell lines (14); regulation of EGF receptor expression by TNF alpha (15) 6) Study of cell growth regulation (19) 7) Study of cell invasiveness and tumorigenicity (20) Bibliography: (1) GLIA, 11 (3) 277-83 /1994 (2) NEUROSCIENCE LETTERS, 171 (1-2) 221-4 /1994 (3) ONCOLOGY RESEARCH, 5 (10-11) 423-32 /1993 (4) EUROPEAN JOURNAL OF PHARMACOLOGY, 254 (3) 221-7 /1994 (5) BRITISH JOURNAL OF PHARMACOLOGY, 111 (2) 598-608 /1994 (6) JOURNAL OF VIROLOGY, 68 (2) 959-73 /1994 (7) JOURNAL OF VIROLOGY, 67 (12) 7547-55 /1993 (8) JOURNAL OF NEUROCHEMISTRY, 59 (2) 406-14 /1992 (9) JOURNAL OF VIROLOGY, 67 (10) 5939-47 /1993 (10) AMERICAN JOURNAL OF PATHOLOGY, 142 (3) 883-92 /1993 (11) BIOCHIMICA ET BIOPHYSICA ACTA, 1175 (3) 257-62 /1993 (12) JOURNAL OF VIROLOGY, 65 (12) 6969-78 /1991 (13) BIOCHEMICAL AND BIOPHYSICAL RESEARCH COMMUNICATIONS, 179 (3) 1232-40 /1991 (14) NO TO SHINKEI. Release Conditions	No
DNA Available from Stock	No

The ECACC collections represent deposits of cell cultures from world-wide sources. While every effort is made to ensure details distributed by ECACC are accurate, ECACC cannot be held responsible for any inaccuracies in the data supplied. References where quoted are mainly attributed to the establishment of the cell culture and not for any specific property of the cell line, therefore further references should be obtained regarding cell culture characteristics. Passage numbers where given act only as a guide and ECACC does not guarantee the passage number stated will be the passage number received by the customer.

#### Notices and Disclaimers

ATCC products are intended for laboratory research purposes only. They are not intended for use in humans.

While ATCC uses reasonable efforts to include accurate and up-to-date information on this site, ATCC makes no warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. ATCC does not warrant that such information has been confirmed to be accurate.

All prices are listed in U.S. dollars and are subject to change without notice. A discount off the current list price will be applied to most cultures for nonprofit institutions in the United States and Canada. Cultures that are ordered as test tubes or flasks will carry an additional laboratory fee. Fees for permits, shipping, and handling may apply.

You may continue your word search in Cell Lines by typing in your search criteria below or returning to the Cell Lines menu. To search another product line, choose one from the dropdown box at the top. For complex searches using boolean operators, the following characters must be used: & (for AND), | (for OR), ^ (for AND NOT). An asterisk (\*) is used as the wildcard. ## Search

Before submitting an order you will be asked to read and accept the terms and conditions of ATCC's Material Transfer Agreement.

Customers in Europe, Australia, Japan, Korea, New Zealand and Taiwan must contact a local distributor for pricing information and to place an order for ATCC cultures and products.

Cell Lines	
<b>ATCC Number:</b> CRL-2020	<a href="#">Order this item</a>
<b>Designation:</b> DBTRG-05MG	<b>Price:</b> \$215.00
<b>Biosafety Level:</b> 1	<b>Depositors:</b> CA Kruse
<b>Medium &amp; Serum:</b> See Propagation	<b>Shipped:</b> frozen
<b>Organism:</b> <i>Homo sapiens</i> (human)	<b>Growth Properties:</b> adherent
<b>Tissue:</b> brain; glial cell; glioblastoma	<b>Morphology:</b> fibroblast
<b>Cellular Products:</b> vimentin; S-100 protein; neuron specific enolase	
<b>Permits/Forms:</b> In addition to the MTA mentioned above, other ATCC and/or regulatory permits may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please click here for information regarding the specific requirements for shipment to your location.	
<b>Related Cell Culture Products</b>	
<b>Comments:</b>	The DBTRG-05MG (Denver Brain Tumor Research Group 05) cell line was established from tissue from a patient with glioblastoma multiforme who had been treated with local brain irradiation and multidrug chemotherapy. The cells are negative for platelet derived growth factor (PDGF), neuronal cell adhesion molecule (NCAM), glial fibrillary acid protein (GFAP) and class II antigen (HLA DR). No loss of heterozygosity in the p53 tumor suppressor gene was detected.
<b>Receptors Expressed:</b>	epidermal growth factor (EGF)
<b>Antigen Expression:</b>	Class I antigen expressed
<b>DNA Profile (STR):</b>	Amelogenin: X CSF1PO: 10,11 D13S317: 9 D16S539: 10,12 D5S818: 12,13 D7S820: 11 TH01: 7,8

	TPOX: 8 vWA: 15,16
<b>Karyotype:</b>	near tetraploid; range 87 to 91; most cells were missing copies of chromosome 10 and had extra copies of chromosome 7
<b>Age Stage:</b>	59 years
<b>Gender:</b>	from female organisms(s)
<b>Ethnicity:</b>	Caucasian
<b>Propagation:</b>	ATCC medium: RPMI 1640 medium with 10 mg/L adenine, 1 mg/L adenosine triphosphate, 100 mg/L L-cystine, 5950 mg/L HEPES, 15 mg/L hypoxanthine, 50 mg/L L-isoleucine, 50 mg/L L-proline, 100 mg/L sodium pyruvate and 1 mg/L thymidine, 90%; fetal bovine serum, 10%
<b>Subculturing:</b>	Remove medium, add fresh 0.25% trypsin, rinse and remove trypsin. Let the flask sit at room temperature (or incubate at 37C) until the cells detach. Add fresh medium, aspirate and dispense into new flasks.
<b>Split Ratio:</b>	A subcultivation ratio of 1:3 to 1:4 is recommended
<b>Fluid Renewal:</b>	Every 2 to 3 days

Cell Lines	
<b>ATCC Number:</b> CRL-2365	<a href="#">Order this item</a>
<b>Designation:</b> M059K	<b>Price:</b> \$175.00
<b>Biosafety Level:</b> 1	<b>Depositors:</b> J Allalunis-Turner RS Day
<b>Medium &amp; Serum:</b> See Propagation	<b>Shipped:</b> frozen
<b>Organism:</b> <i>Homo sapiens</i> (human)	<b>Growth Properties:</b> adherent
<b>Tissue:</b> brain; glial cell; malignant glioblastoma; glioma	<b>Morphology:</b> fibroblast
<b>Permits/Forms:</b> In addition to the MTA mentioned above, other ATCC and/or regulatory permits may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please click here for information regarding the specific requirements for shipment to your location.	
<b>Related Cell Culture Products</b>	
<b>Comments:</b>	M059K cells were isolated from a tumor specimen taken from a 33 year old male with untreated malignant glioblastoma The cells were isolated concurrently from the same tumor specimen as M059J (see CRL-2366). M059K cells express normal levels of DNA-dependent protein kinase while M059J cells lack DNA-dependent protein kinase activity M059K cells are approximately 30-fold less sensitive to ionizing radiation than M059J cells M059K cells are less sensitive than M059J cells to the cytotoxic effects of bleomycin, N,N-bis(2-chloroethyl)-N-nitrosourea and nitrogen mustard M059K cells are proficient in repair of DNA double strand breaks The cells are negative for glial fibrillary acidic protein (GFAP) Together, M059K and M059J provide a useful model system in which to study the role of DNA protein kinase in cellular and molecular processes involving DNA damage recognition and repair
<b>Tumorigenic:</b>	Yes, forms tumors in SCID mice
<b>DNA Profile (STR):</b>	Amelogenin: X,Y CSF1PO: 10,12 D13S317: 14 D16S539: 10,12 D5S818: 11,12 D7S820: 10 TH01: 9.3

	TPOX: 8 vWA: 17
<b>Karyotype:</b>	Number of cells examined = 59; Modal Chromosome Number = 75 with a range of 65 to 79; Polyploidy Rate = 22%
<b>Age Stage:</b>	33 years
<b>Gender:</b>	from male organism(s)
<b>Hela Markers:</b>	No
<b>Propagation:</b>	ATCC medium: These cells are grown in a medium containing a 1:1 mixture of Dulbecco's Modified Eagle's Medium and Ham's F12 medium with 2.5 mM L-glutamine adjusted to contain 15 mM HEPES, 0.5 mM sodium pyruvate, and 1.2 g/L sodium bicarbonate supplemented with 0.05 mM non-essential amino acids and 10% fetal bovine serum. Temperature: 37.0 C
<b>Subculturing:</b>	Remove medium, and rinse with 0.25% trypsin, 0.53 mM EDTA solution. Remove the solution and add an additional 1 to 2 ml of trypsin-EDTA solution. Allow the flask to sit at room temperature (or at 37C) until the cells detach. Add fresh culture medium, aspirate and dispense into new culture flasks.
<b>Split Ratio:</b>	A subcultivation ratio of 1:6 to 1:8 is recommended
<b>Fluid Renewal:</b>	Every 2 to 3 days
<b>Freeze Medium:</b>	culture medium 95%; DMSO, 5%
<b>Related Products:</b>	Recommended medium (without the additional supplements or serum described under ATCC Medium) - ATCC No: 30-2006 recommended serum - ATCC No: 30-2020 derived from same individual - ATCC No: CRL-2366

Cell Lines	
<b>ATCC Number:</b> HTB-15	<a href="#">Order this item</a>
<b>Designation:</b> U-118 MG	<b>Price:</b> \$175.00
<b>Biosafety Level:</b> 1	<b>Depositors:</b> J Ponten
<b>Medium &amp; Serum:</b> See Propagation	<b>Shipped:</b> frozen
<b>Organism:</b> <i>Homo sapiens</i> (human)	<b>Growth Properties:</b> adherent
<b>Tissue:</b> brain; glioblastoma; astrocytoma	<b>Morphology:</b> mixed
<b>Permits/Forms:</b>	In addition to the MTA mentioned above, other ATCC and/or regulatory permits may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please click here for information regarding the specific requirements for shipment to your location.
<b>Related Cell Culture Products</b>	
<b>Comments:</b>	NOTE: The two glioblastoma cell lines, U-118 MG (HTB-15) and U-138 MG (HTB-16), reportedly from different individuals have identical VNTR and similar STR patterns. U-118 MG and U-138 MG are very similar cytogenetically and share at least six derivative marker chromosomes. This is one of a number of cell lines derived from malignant gliomas (see also ATCC HTB-14, ATCC HTB-16 and ATCC HTB-17) by J. Ponten and associates from 1966 to 1969. Mycoplasma contamination was eliminated in 1987 by treatment with BM-Cycline over a six week culture period.
<b>Tumorigenic:</b>	Yes, in nude mice inoculated subcutaneously with 10(7) cells (Tumors developed within 21 days at 100% frequency (5/5).)
<b>Antigen Expression:</b>	Blood Type A, Rh+; HLA Aw24, A28, B12, Bw47
<b>DNA Profile (STR):</b>	Amelogenin: X,Y CSF1PO: 11,12 D13S317: 9 D16S539: 12,13 D5S818: 11 D7S820: 9 TH01: 6 TPOX: 8 vWA: 18

<b>Karyotype:</b>	The line has a near pentaploid chromosome number and a wide range of chromosome number distribution (40% of the cells had numbers ranging from 110 to 115). The following 14 markers were found in most metaphases: t(1p,2p), t(3p,?), t(4p,11q), t(7p,22q), M6, t(9q,?), i(11q)18q t(10q,?), M14, M15, M16, M17 and t(10q,22q); 6 of these were found in some and 10 were seen in one only. Normal chromosomes 7, 8, 12, 19, 20 and 22 had 5 to 6 copies per cell; the X had two copies and the Y was absent.
<b>Isoenzymes:</b>	AK-1, 1-2; ES-D, 1; G6PD, B; GLO-I, 1-2; Me-2, 1; PGM1, 2; PGM3, 2
<b>Age Stage:</b>	50 years
<b>Gender:</b>	from male organism(s)
<b>Ethnicity:</b>	Caucasian
<b>Propagation:</b>	ATCC medium: Dulbecco's modified Eagle's medium with 4 mM L-glutamine adjusted to contain 1.5 g/L sodium bicarbonate and 4.5 g/L glucose, 90%; fetal bovine serum, 10% Temperature: 37.0 C
<b>Subculturing:</b>	Remove medium, and rinse with 0.25% trypsin, 0.03% EDTA solution. Remove the solution and add an additional 1 to 2 ml of trypsin-EDTA solution. Allow the flask to sit at room temperature (or at 37C) until the cells detach. Add fresh culture medium, aspirate and dispense into new culture flasks.
<b>Split Ratio:</b>	A subcultivation ratio of 1:3 to 1:8 is recommended
<b>Fluid Renewal:</b>	2 to 3 times per week
<b>Freeze Medium:</b>	Culture medium, 95%; DMSO, 5%
<b>Related Products:</b>	Recommended medium (without the additional supplements or serum described under ATCC Medium) - ATCC No: 30-2002 recommended serum - ATCC No: 30-2020
